DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 14 and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 14, line 2, "within a range" is unclear.

Regarding claim 16, the control terminals and the output terminals being "put together" in the folded part and "put together and arranged" in the connector cavity are unclear to the Examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-15 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 11-285132. JP 11-285132 discloses an electrical junction box comprising: a first bus bar 51' which has a power terminal 49 formed therein and distributes and supplies power derived from the power terminal; a second bus bar 31 in which a plurality of relay parts 36, to which power is supplied from the first bus bar, are fixed to each relay fixing part

Art Unit: 2833

and control terminals 45 and output terminals 43 of the relay parts are formed; and a case C1 which houses the first and second bus bars therein and has a connector cavity part in which the power terminal, the control terminals and the output terminals are arranged, wherein, in the second bus bar, a folded part (near 42) is formed which is folded in a plane direction of the bus bar.

Regarding claim 14, the folded part is set between the relay fixing part 46 and each of the control terminals 45 and output terminals 43 and the control terminals and the output terminals can be arranged in the connector cavity.

Regarding claim 15, the folded part is folded substantially at a right angle to a direction in which the relay parts are fixed to the relay fixing part and is folded substantially at a right angle to the control terminals and the output terminals.

Regarding claim 16, the control terminals and the output terminals extend from the periphery of the relay fixing part, are put together in the folded part and the control terminals and the output terminals are put together and arranged in the connector cavity.

Allowable Subject Matter

Claim 16 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: patentability resides, at least in part, in the control terminals and the output

Art Unit: 2833

terminals extend from the periphery of the relay fixing part, in combination with the limitations of the base claim.
